

**Preâmbulo do curso (resumo do curso a usar nos materiais de publicidade, e-mail e portal, outros)**

The workshop group of the IMM/CAML PhD students committee is pleased to announce the Workshop “**Graphical Design**”, on the 22<sup>nd</sup> of June 2023 from 9h00-17h00 Place 2.01, no Ed. Reynaldo dos Santos.

This workshop aims to develop the necessary techniques to elaborate scientific images, figures, schemes, and graphical abstracts for the purpose of scientific communications (oral presentations, posters and publications). The students will have the opportunity to learn how to optimize the process of figure building, to make it more appealing without losing the focus on the main scientific conclusions. Moreover, this will be a very hands-on workshop, where everyone will have the opportunity to improve figure/images/schemes related with their own work and improve their knowledge on the use of the software *Illustrator* by Adobe, as the speaker is an experienced user of the latter.

Helena Pinheiro is science communicator with a scientific background and a PhD in Cellular and Molecular Biology, who specialised on translating and sharing science through visuals. She is currently a science communication officer in Instituto de Medicina Molecular João Lobo Antunes, in Lisbon, where she is responsible for creating diagrams and illustrations for scientific publications, research grant proposals, institutional documents, covers, and press releases, aiming to contribute to a clear communication of science.
